

Next generation search

## Tired of scrolling through pages of results to find what you are looking for?

We have a solution. It's as easy as  

Rinalogy Search is an interactive next generation search tool that uses machine learning to return personalized results based on user feedback.

This patented adaptive search method can be used on many data sources and in many languages. It can be applied to the data on the web or behind a firewall, to search SharePoint and other internal information.

Rinalogy Search can be used as a stand alone search technology or as an add-on to complement any existing search software, e.g. Google, Bing, SharePoint, Elasticsearch, SQL server and others, to significantly improve results.

The example below shows result from Google, Bing and Windows Search Service (WSS).

The screenshot shows the Rinalogy Search interface. At the top left is the Rinalogy logo. The search bar contains the text 'mole problem' and a search icon. Below the search bar are tabs for 'Google', 'Bing', and 'WSS'. The search results are displayed in a list format. Each result includes a thumbs up/down icon, a title, a URL, and a snippet of text. The results are grouped by source: 'Google + Bing', 'Bing + Google', 'Windows Search', and 'Bing'. The results include a YouTube video, an article from the American Academy of Dermatology, a document titled 'longtunnel.doc', a news article from msn.com about NASA, and a PDF document about moles.

Users respond to the initial results by selecting   to express the relevance of each result.

Rinalogy Search processes user responses and builds a model on each search term to predict and return the information the user is actually looking for.

In this example, “mole problem” could relate to a rodent, chemistry, skin cancer or espionage.

mole problem x Enter a term here...

<file:D:/Docs/Mole skin pdf/PDF.pdf>  
 AMERICAN MOLES AS AGRICULTURAL PESTS AND AS FUR PRODUCERS Jff. MOLES have been dealt with in the United States chiefly as a nuisance, but in some European countries they are trapped extensively not only to be rid of them as a pest but also to harvest their pelts. Millions of European moleskins have been used by fur manufacturers in this country and until recently have furnished the sole supply. T...

It only takes a few simple clicks for Rinalogy Search to quickly find the right results.

The software shows a percent (%) likelihood that a new document will be relevant to the user. It also indicates the model quality (shown in green in the upper right). When a user is satisfied with the model's quality, it can be applied to **ALL** records to find more relevant results.

Users can also weigh individual parts of a query which affects document weighting and the quality of results.

Rinalogy Search works with documents in English, Spanish, German, Russian, Chinese, Japanese and Korean.

Rinalogy Search is capable of running concept queries in seconds on the internet, intranet or a user's data store.

Rinalogy Search is the only solution for users who cannot afford to miss critical information.

Our team of experts are here to help you get the most out of your data. We work closely with your team to implement our solutions and provide professional services such as:

- Integration with new data sources and languages;
- Customization and implementation of new features;
- Configuration and deployment behind the firewall.
